

Stefan Arens (51) KZV

born in the middle highlands of Germany (Sauerland, Menden), study bio tec. in Emden, I financed my study by teaching practical sail for tourists on Norderney island.

Changed my goal when I was 25 years old. Started a career to a director of photography. Working as a cameraman. I met wonderful locations and people all over the world.

The newest filming topic of my TV production company is: „The return of the windjammers“

That is no joke! Look to the modern Windmills! Nobody talked about this 30 years ago. So now I'm here. Learning the topics I plan to talk about in the future.

I met a wonderful school, teachers and directors here in Enkhuizen. The books, the library, the maps and all the facilities at the school are very fruitful. My wishes for the school: in times of climate change please consider the power of the wind for the future.

My vision: to build the first modern cargo sailer.

My personal experience: Sailing on the four mast bark Sedov and Kruzenshtern. O-Ton of the masters: our mission is only possible because saving so much money by the wind.
